## Presentation of the new LINEA 5000 with Netatmo by BTicino

Draft Press Release: vs 06 | 2024

#ImprovingLives

**bticino**

A brand of **legrand**

## **LINEA 5000** **A modern innovation in building access.**

### *#### Introduction*

This new digital smart entry panel is designed to completely transform the building access experience, from installation to daily use and maintenance.

**LINEA 5000 with Netatmo: Digital. Functional. Performing.**

### *#### Part I: General Presentation of the LINEA 5000*

Linea 5000 from BTicino is an entrance panel that simplifies access and adapts perfectly to modern lifestyles. It is a perfect combination of "Made in Italy" style and innovation. Inspired by modern architecture, this solution offers cutting-edge design, sophisticated details and innovative functions, enhancing the value of any entrance. The aluminium frame protects the display, while the bevelled edges give it a slim and yet sturdy appearance.

The technology, including the sensors, is hidden behind dark glass that activates when approached, revealing an intuitive interface.

Thanks to the improved video quality, every image can be captured in high quality. The large 7" touch screen display, resistant to water and tampering (IP65, IK08), and the smart, easy and secure access features make Linea 5000 the ideal choice for the modern lifestyle and whenever elegant innovation is a must.

### *#### Part II: Distinctive Features*

**Digital and physical customisation to meet all requirements.**

This product can be easily adapted to all types of buildings: possibility of customised finishes, with frames in assorted colours; logo and street number for total adaptability. All this makes Linea 5000 particularly suitable for meeting the customisation requests from architects, design studios, real estate developers and customers.

## **Innovative functionality to suit modern lifestyles.**

Linea 5000 with Netatmo stands out not only for its unique style, but also for its smart attitude. Its innovative features are designed to adapt to today's lifestyles.

Installation and maintenance of the entrance panel are simplified by the digital tools provided. **The Home + Project app is dedicated to the installer, while the Home + Security app is designed for the user.** Many of the function follow the navigation logic of smartphones, making everything very intuitive to use.

Users can even leave personalised messages for visitors, such as Airbnb guests or couriers, and access the building using their smartphone, code or keycard.

In addition, the pushbutton panel offers greater privacy, allowing users to independently change their names by themselves, without having to contact the facility manager.

## **A positive impact.**

Brightness and proximity sensors ensure energy efficiency, as the screen only activates when needed. The interface has been conceived with a "design for all" approach and can adapt to all types of users, including those who need voice assistance, high colour contrast and customised text messages.

Linea 5000 components can be easily separated for recycling.

The outer and finishing frames, **made of 60% recycled aluminium**, are a step towards a more sustainable approach.

This opens the way to a new era of digital products that contribute to improving our daily lives.

### **### Conclusion**

*In a nutshell, the new Linea 5000 pushbutton panel takes building access to a higher level. Ideal for the digitalisation of multi-apartment blocks, with its refined design and state-of-the-art functionality it represents a complete solution that meets the needs of modern buildings and all the performance, flexibility and customisation requirements.*

There are 3 different length versions for the presentation of the new features of Linea 5000 with Netatmo, with high quality images / pictures as a separate pack:

## **LINEA 5000**

### **A modern innovation in building access.**

The new Linea 5000 digital entry panel represents a significant breakthrough in building access, offering a complete smart experience, from installation to daily use and maintenance. A perfect combination of “Made in Italy” style and advanced technology.

Inspired by modern architecture, this solution offers cutting-edge design, sophisticated details and innovative functions, enhancing the value of any entrance.

Linea 5000 comes with a large 7-inch touch screen display and an HQ camera, capable of capturing every image in high quality.

Resistance to water and tampering (IP65, IK08), and the smart easy and secure access features make Linea 5000 the ideal choice for the modern lifestyle and whenever elegant innovation is a must.

The aluminium frame protects the display, while the bevelled edges give it a slim yet durable appearance. The technology, including the sensors, is hidden behind dark glass that activates when approached, revealing an intuitive interface that follows the navigation logic of smartphones.

The installation, maintenance and use of Linea 5000 have been made much simpler thanks to the digital tools provided, which include a dedicated app for installers, Home + Project, and another for users, Home + Security, which they can use to leave personal messages for visitors, such as Airbnb guests or couriers, or access the building using their smartphone, code or badge, or even independently change their names by themselves, without having to contact the facility manager.

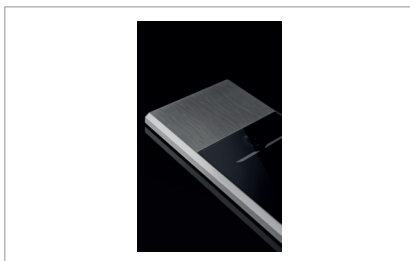

Perfectly compatible with existing BTicino 2 wires installations, Linea 5000 is the ideal choice for the digitalisation of multi-occupancy contexts. This product can be easily adapted to all types of buildings: possibility of customised finishes, with frames in assorted colours; logo and street number for total adaptability. All this makes Linea 5000 particularly suitable for meeting the customisation requests from architects, design studios, real estate developers and customers.

Brightness and proximity sensors allow efficient use of energy, only activating the screen when necessary. The interface, designed with an inclusive “design for all” approach, adapts to different requirements, including voice assistance and high colour contrast. Linea 5000 components can be easily separated for recycling. The finishes and their internal fixing frames, made of 60% recycled aluminium, represent a step towards a more sustainable approach. This opens the way to a new era of digital products that contribute to improving our daily lives.
